

Shared mapping to build a territorial narrative

"Mappiamo" is a citizen science initiative whose initial scope is the territory of the "Montagna Pistoiese".

Using the Open Kobotoolbox platform it is possible to geo-reference minerals, plants, fungi and fauna as well as environments, following a protocol devised by Ecomuseo della Montagna Pistoiese, MuNAP and CNR.

The result is an open and shareable database populated by verified observations stored in a database.

Mapping
to explore

Thanks to KoboCollect (Android) and GIC Collect (iOS) application and the "MunapBiodiversity" questionnaire, it is possible to carry out observations directly from the field, always connected to a local validator who validates the recorded observations.

Sensitive data on rare or fragile species is protected to prevent vandalism and predation.

Take part too!

Scan the QR Codes below for basic instructions and to participate to "Mappiamo".
