

Shared mapping to build a territorial narrative

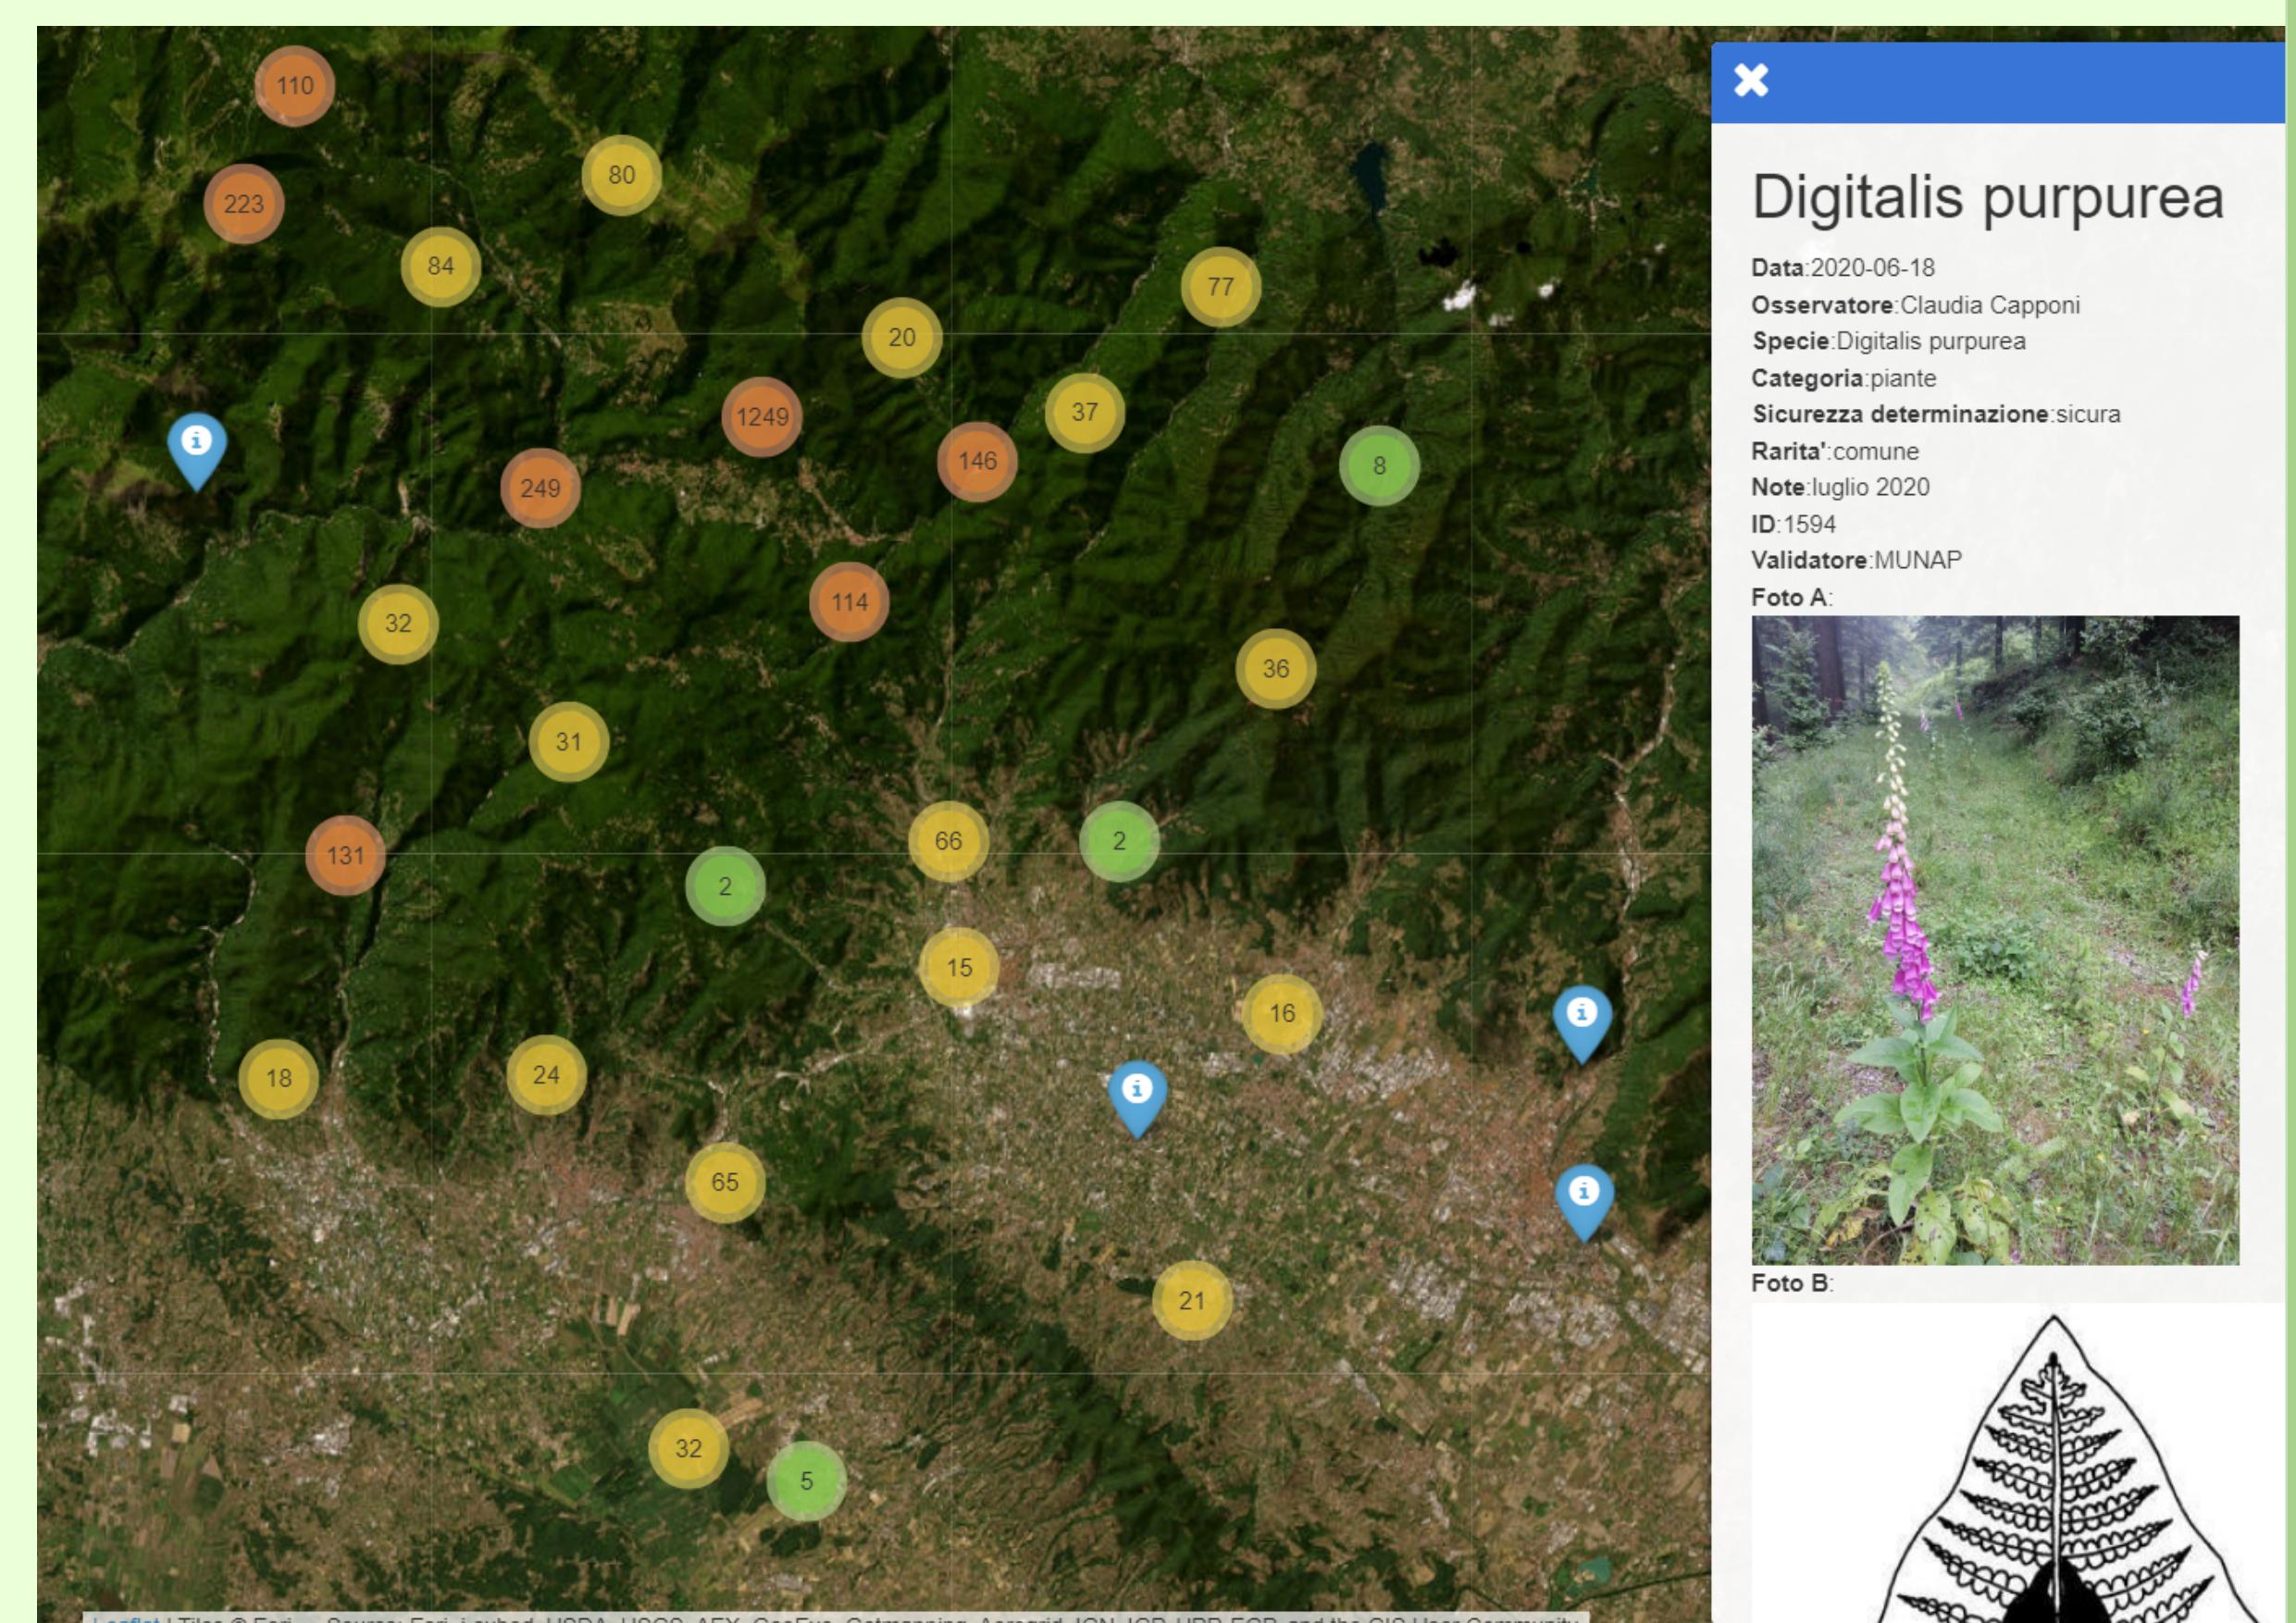

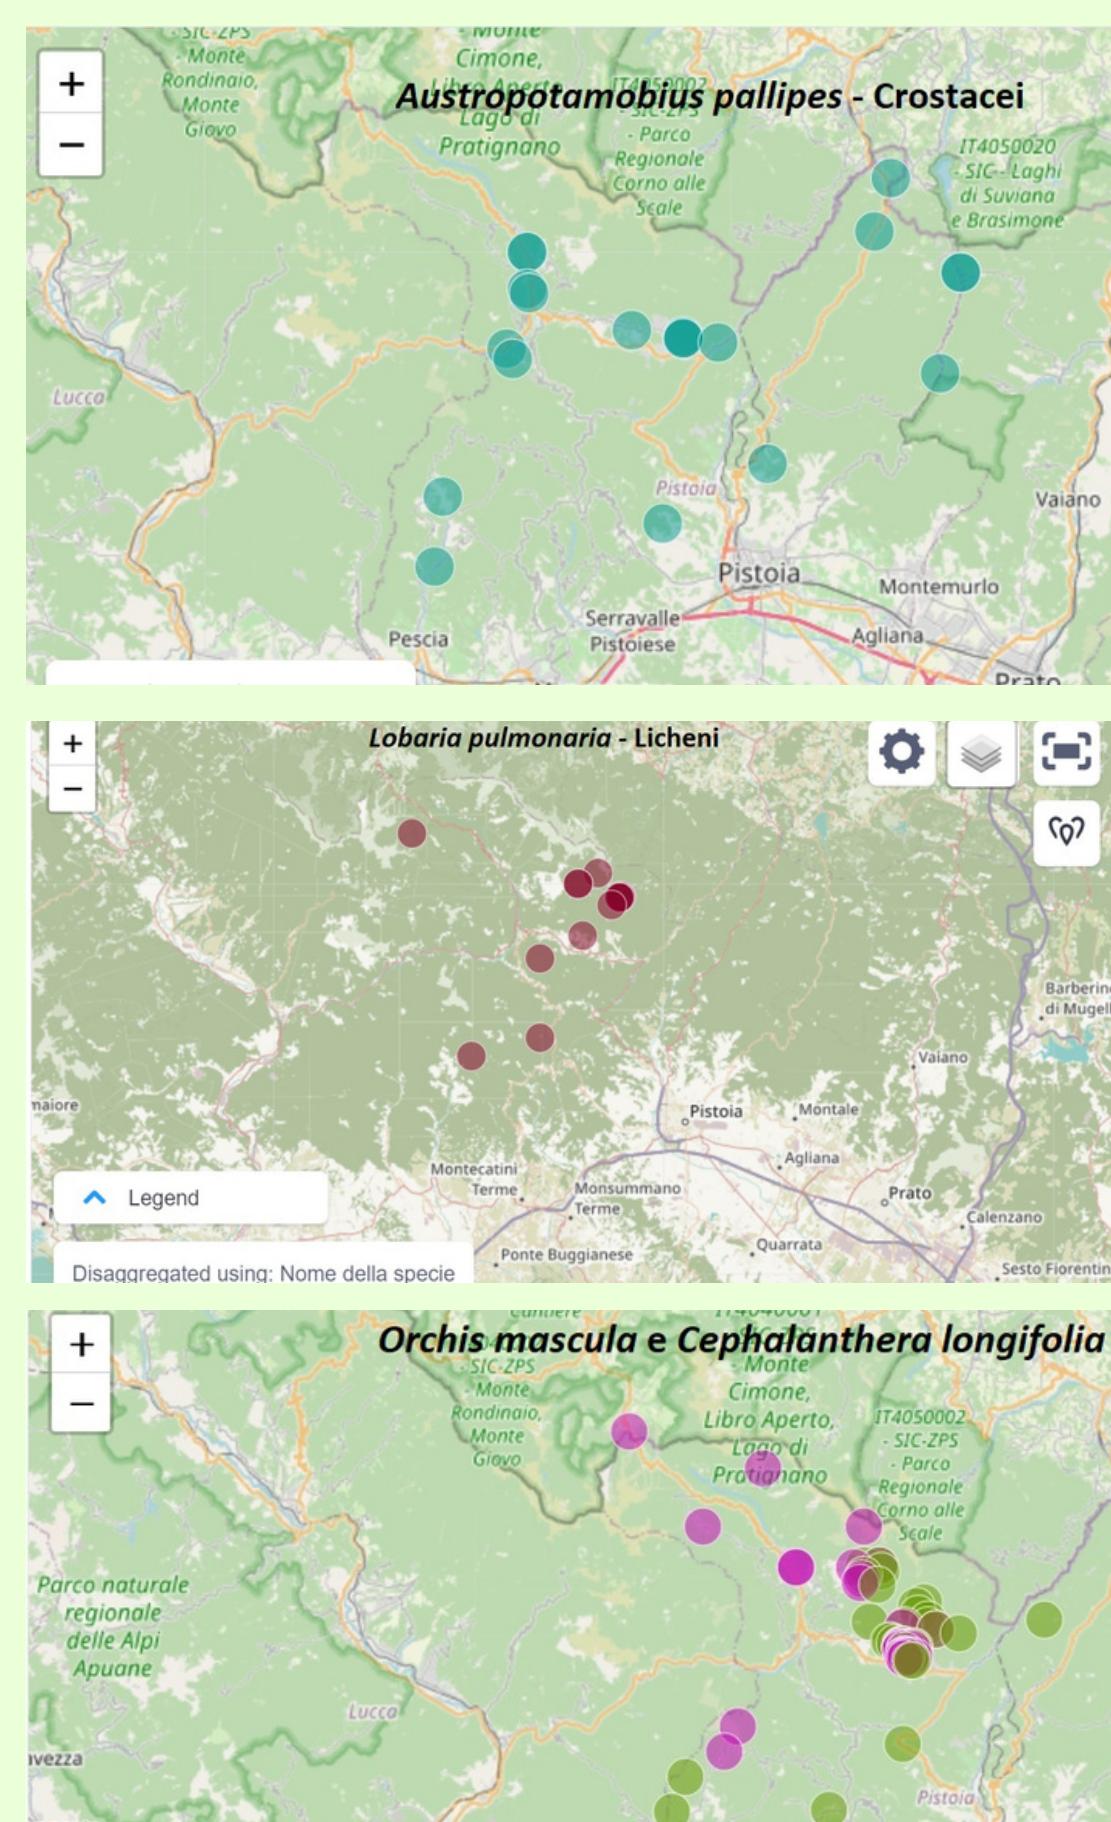

"Mappiamo" is a citizen science initiative whose initial scope is the territory of the "Montagna Pistoiese".

Using the Open Kobotoolbox platform it is possible to geo-reference minerals, plants, fungi and fauna as well as environments, following a protocol devised by Ecomuseo della Montagna Pistoiese, MuNAP and CNR.

The result is an open and shareable populated by verified observations stores in a database.

Mapping
to explore

With the KoboCollect (Android) and GIC Collect (iOS) applications and the "MunapBiodiversity" questionnaire, it is possible to carry out observations from the field, always connected to a local validator who approves or rejects the recorded observations. Sensitive data on rare or fragile species is protected to prevent vandalism and predation.

Take part too!
